

BlockChain Project - Report

Title: Decentralised Lending and Borrowing system

Team: CryptoCred

Team Members:-

Abhinandan S - PES1UG22CS014

Amit - PES1UG22CS075

Supreet Biradar - PES1UG22CS632

Sushant Khot - PES1UG22CS635

1. Introduction:-

This is a Decentralized Lending System DApp built on Ethereum that allows users to lend and borrow funds through smart contracts. The system features a fixed interest rate model (2 ETH per loan) and includes functionalities for requesting loans, funding loans, and repayment. The project uses Truffle for smart contract development, React for the frontend, and MetaMask for wallet integration, with Ganache serving as the local Ethereum test network.

2. Problem Statement:-

Traditional lending systems are centralized, limiting borrowers' access to funds and lenders' control over their investments. Borrowers often face high interest rates and complex approval processes, while lenders struggle with trust issues and lack of transparency. Our project addresses these issues by implementing a decentralized lending system on Ethereum, where:

- ❖ Lenders can add funds to the contract and approve loan requests.
- ❖ Borrowers can request loans directly from the lending pool.
- ❖ Interest rates are fixed and transparent (2 ETH per loan).
- ❖ Loan states and transactions are securely recorded on the blockchain.
- ❖ Smart contracts automatically manage loan lifecycle (request, funding, repayment).
- ❖ All transactions are transparent and verifiable on the blockchain.
- ❖ MetaMask integration ensures secure wallet management and transaction signing.
- ❖ The system operates without intermediaries, reducing costs and increasing efficiency.

3. Blockchain Implementation Details:-

Smart Contract Architecture:-

TheDApp consists of two Solidity contracts:

A) SimpleLendingContract.sol

- ❖ Defines a loan structure: borrower address, requested amount, repay amount, interest rate, state, and timestamp.
- ❖ Implements fixed interest rate model (2 ETH per loan).
- ❖ Tracks available balance and loan status.
- ❖ Includes functions like requestLoan, fundLoan, repayLoan, getLoanDetails, and getRepayAmount.

B) SafeMath.sol

- ❖ Provides secure mathematical operations for the lending contract.
- ❖ Prevents overflow and underflow vulnerabilities.
- ❖ Ensures safe arithmetic operations for loan calculations.
- ❖ Used for balance management and interest calculations.

Key Functions Implementation:

❖ Loan Management:

- requestLoan: Allows borrowers to request new loans
- fundLoan: Enables lenders to fund approved loans
- repayLoan: Handles loan repayment process
- getLoanDetails: Retrieves complete loan information

❖ Fund Management:

- addFunds: Allows lenders to add funds to the contract
- calculateRepayAmount: Computes total repayment amount
- getRepayAmount: Returns specific repayment amount

❖ **State Management:**

- Loan state tracking (Requested, Funded, Repaid, Defaulted)
- Balance management
- Transaction verification

❖ **Security Features:**

- Input validation
- State verification
- Balance checks
- Safe mathematical operations

4. Frontend and Storage Integration:-

Frontend Stack

- Framework: React (with Create React App for development)
- Styling: CSS (custom component styling)
- Wallet: Integrated with MetaMask for blockchain interactions
- Web3 Integration: Web3.js for smart contract interaction

Smart Contract Integration

- Truffle for contract compilation and deployment
- Ganache for local Ethereum network testing
- Contract artifacts stored in client directory for frontend access

Features

- Wallet Connection Interface
 - MetaMask integration
 - Account selection
 - Network verification
 - Connection status display

- Loan Management Interface

- Lender Operations:
 - Add funds to contract
 - Approve loan requests
 - View available balance
- Borrower Operations:
 - Request new loans
 - Repay existing loans
 - View loan status

- User Interface Components

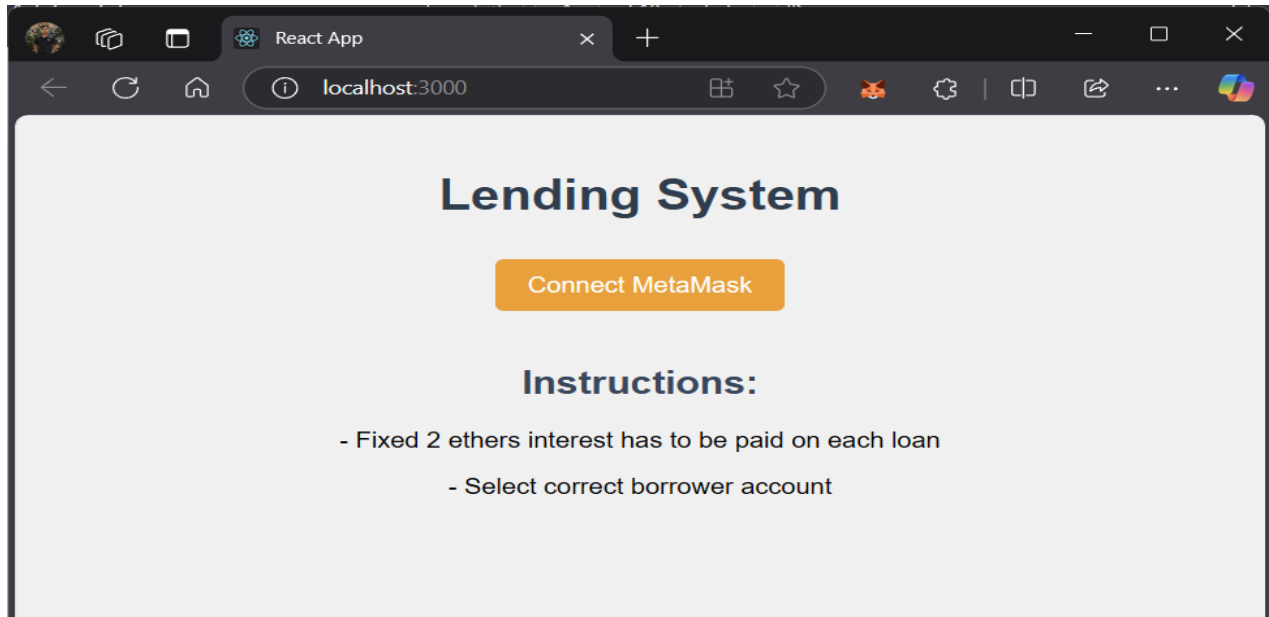

- Account selection dropdown
- Operation selection menu
- Amount input field
- Transaction status display
- Error and success messages

- Responsive Design

- Desktop and mobile compatibility
- Clean and intuitive layout
- Clear operation instructions
- Transaction feedback system

5. Screenshots of the Working Application:-

vi) after lender funds loan:

The screenshot displays the 'Lending System' web application interface on the left and a browser's developer console on the right.

Lending System Interface:

- Header:** 'Lending System' in a large, bold, dark blue font.
- Connected Account:** '0x290de4ff1779ec728eef860cec77df82dbf6259b'.
- Network ID:** '1337'.
- Instructions:**
 - Fixed 2 ethers interest has to be paid on each loan
 - Select correct borrower account
- Form Section:**
 - Select Borrower:** A dropdown menu with the selected value '0x4080836a1c551a000eb37358b3880f8c7a0bde0'.
 - Select an option:** A dropdown menu with the selected value 'Borrower: View Loan Status'.
 - Enter MsgValue:** An empty text input field.
 - Submit:** A blue button labeled 'Submit'.
- Footer:** A green button labeled 'Viewed Loan on Console'.

Developer Console:

- The console shows a warning: 'Removing unpermitted intrinsic' from 'lockdown-install.js:1'.
- A message: 'Download the React DevTools for a better development experience: https://reactjs.org/link/react-devtools'.
- A log entry for 'Loan Status' from 'App.js:173' showing a JSON object:

```
{
  "g": {
    "0x4080836a1c551A000EB37358B3880F8C7a0bDE0": "10000000000000000000",
    "3000000000000000000000000": "2",
    "1745602892": "borrower: '0x4080836a1c551A000EB37358B3880F8C7a0bDE0', requestedAmount: '10000000000000000000', repayAmount: '30000000000000000000', interestRate: '2', state: '2', -]"
  }
}
```

vii)after repay loan

6. Future Enhancements:-

Enhanced Wallet Support:

- Integration with additional wallet providers
- Improved wallet connection experience
- Better cross-platform compatibility

- **Advanced Analytics:**

- Loan performance tracking
- Interest earnings monitoring
- Borrower repayment history
- Financial insights dashboard

- **Multi-Chain Expansion:**

- Support for additional blockchain networks
- Cross-chain loan management
- Chain-specific lending features

- **Credit System:**

- Decentralized credit scoring
- Borrower reputation tracking
- Risk assessment tools
- Trust-based lending options

7.Conclusion:-

The Decentralized Lending System demonstrates the transformative potential of blockchain technology in revolutionizing traditional lending practices. By leveraging Ethereum smart contracts, MetaMask integration, and a user-friendly frontend, the platform delivers transparency, efficiency, and accessibility in financial transactions. The system's fixed interest model and automated loan management provide a fair and predictable environment for both lenders and borrowers. With continued development and the implementation of planned enhancements, this platform has the potential to evolve into a comprehensive decentralized finance (DeFi) solution, offering secure and efficient lending services while maintaining the core principles of blockchain technology.
